

Brake lights

Posted by 8lug - 2010/11/05 20:21

Love my new 2+2, I thought I had a brake light problem, sometimes working,sometimes not. After much testing,{fuse,switch,etc.}, a trip to our local auto elect.and I find out this car is wired so the brake lights only work when the ignition switch is on!! I had a '66 Catalina back in the '70s but don't remember this, is it a '66 pont. thing,I don't think I know of another wired this way? thanks,Mike
