I suspect that this car did not originally have rally gauges and the entire dash was transplanted from a Bonneville.

Missing tail panel, of course. Try to find one!

I may send for the PHS on this car. The reason is the 4f and 50w on the trim tag. This car makes 3 pontiac built 2+2's with the 4f and 50w codes on the trim tag. All 3 cars are 2+2's with guages. My car and the one at indianapontiacs both have wood wheels and power antenna. The ebay car has neither. There are 8 other pontiac built cars listed in the registry. I would like to see the trim tag on one without guages.

That, in theory would narrow it down a abit. eh?

My guess is the 4f denotes 2+2 option since the 5n denoted the GTO option on the LeMans in 65 for pontiac built cars.

patrick
